

Estimate the crop yield using data analytics

2x2 Grid

Provides a dashbard
and the insights of
Crop production by
taking users details as
input

Says

To create an
estimation of the crop
yield in India using
data analytics.

Thinks

Creates multiple analysis
graphs/charts using the
analyzed chart creation of
the Dashboard is done.And
projects the output in the
screen.

Does

We can improve the
performance by
collaborating data
visualization concept and
data analytics by using
various datasets.
